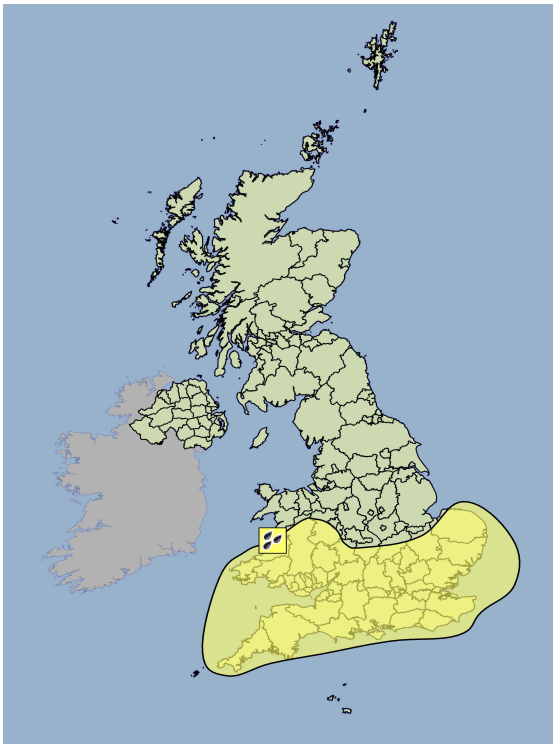
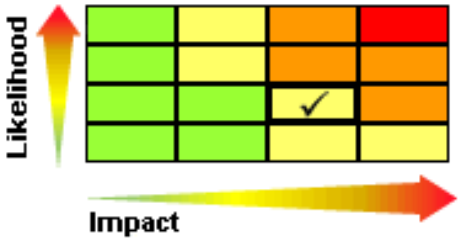
National Severe Weather Warning Service





Chief Forecasters Assessment
Yet another area of low pressure is expected to develop near the Azores, then move northeastwards across England and Wales during Friday afternoon and evening, clearing to the east on Saturday morning. The associated frontal systems will bring spells of heavy and persistent rain, especially across the southern parts of England and Wales. The rain will also be accompanied by gales.

As is usual this far ahead, there is some uncertainty in the track of the system and therefore the location of the most intense rainfall. However, it seems likely that another period of heavy rain will affect the warning area overnight Friday and into Saturday.

Please monitor the website for further updates to this alert over the coming days.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **15:00 on Fri, 14th Feb 2014** until **12:00 on Sat, 15th Feb 2014**

After a brighter interlude on Thursday, with some wintry showers, further spells of persistent and heavy rain are expected to spread northeastwards during Friday afternoon and evening, affecting many parts of England and Wales. The rain will clear away to the east during Saturday morning. Following repeated heavy rainfall events earlier in the week, the public should be aware of the potential for further flooding in places.

This is an update to the Alert first issued on Monday.
